

TITLE

RAPIDLY LOW TEMPERATURE CURABLE HIGH  
BARRIER COATING

ABSTRACT

5           Disclosed herein is a barrier coating that shows decreased  
moisture sensitivity compared to conventional coatings, and provides high  
barrier properties, as well as a rapid method for producing the coating.  
These improvements are generated through use of a boric acid chelating  
agent in the composition and curing the composition with UV/NIR  
10   radiation.
